FENNOVOIMAs NPP PROJECT in PYHÄJOKI
Skellefteå 30.9.2012

What is Hanhikivi?

The 6 m high giant stone Hanhikivi - "Gooserock" is a historical border mark between former Novgorod Republic and Sweden, 1323.

Also the symbol of our hard battle!

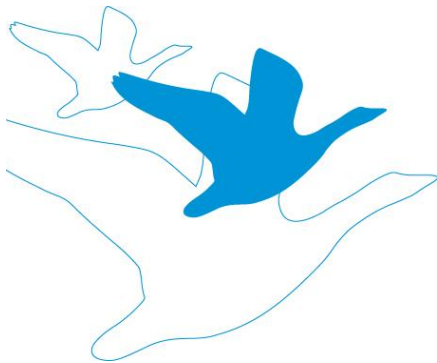

And what is...

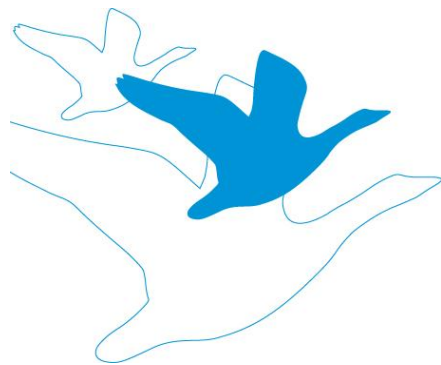

PRO HANHIKIVI

Association was founded (28.12.2007)
to defend the area from the nuclear
power project of Fennovoima.

**"The Project" that no one thought
would last this long, has now
continued over 5 years!**

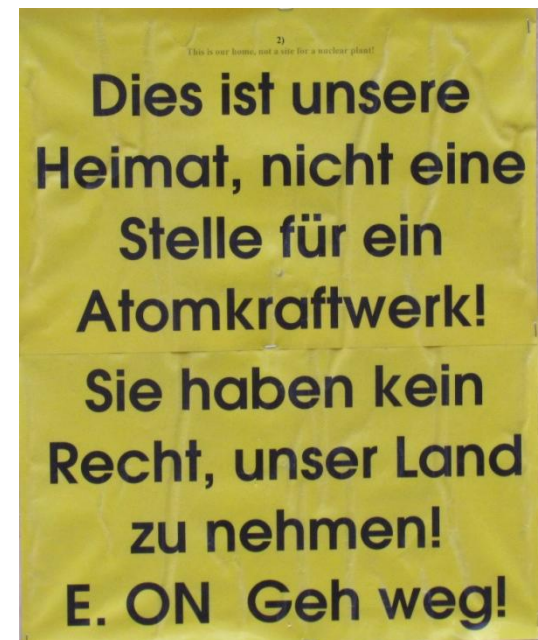

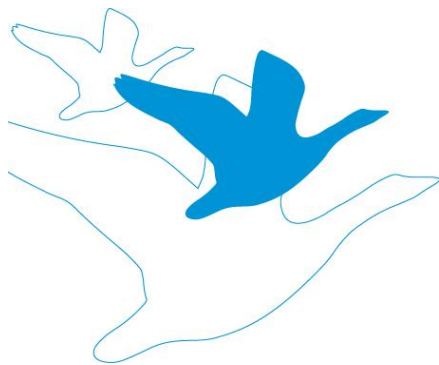

The association Pro Hanhikivi has worked intensively with voluntary workers for over five years in Pyhäjoki, in the surrounding areas, on national and also international level in order to get the problems of nuclear power construction, usage and their environmental hazards to be viewed critically.

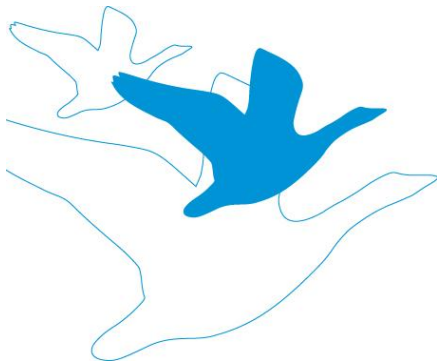

We have formulated...

- **Opinions, responses and recollections on Environmental impact assessment**
- **Responses and opinions on the decision in principle**
- **Participation on several levels of land use planning**
- **Opinions on land use strategy and building preparation**
- **Requirements for corrections**
- **Complaints to all court levels !!!**
- **Notifications**
- **Petitions ...**

We have organised

- **Several civic events in Pyhäjoki, the biggest of which have been the "Hanhikivi Days" in 2009 and 2012. High-level expert seminars, culture programme, outdoor excursions to the area etc. www.hanhikivi.net**
- **We have visited and have been heard in the Parliament and the EU Committee on Petitions**
- **Hanna has participated three times in the E.ONs Annual General Meeting in Germany (biggest shareholder of Fennovoima with 34 %)**

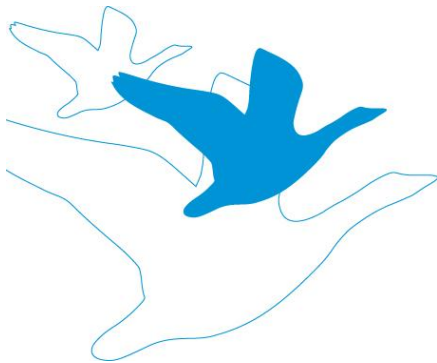

So far nothing has stopped the project -yet,
but Fennovoima can not go on (apply for a
construction license from the Government),
because...

1) Land use planning is not final and legal

**2) Company does not own
all the land and water areas**

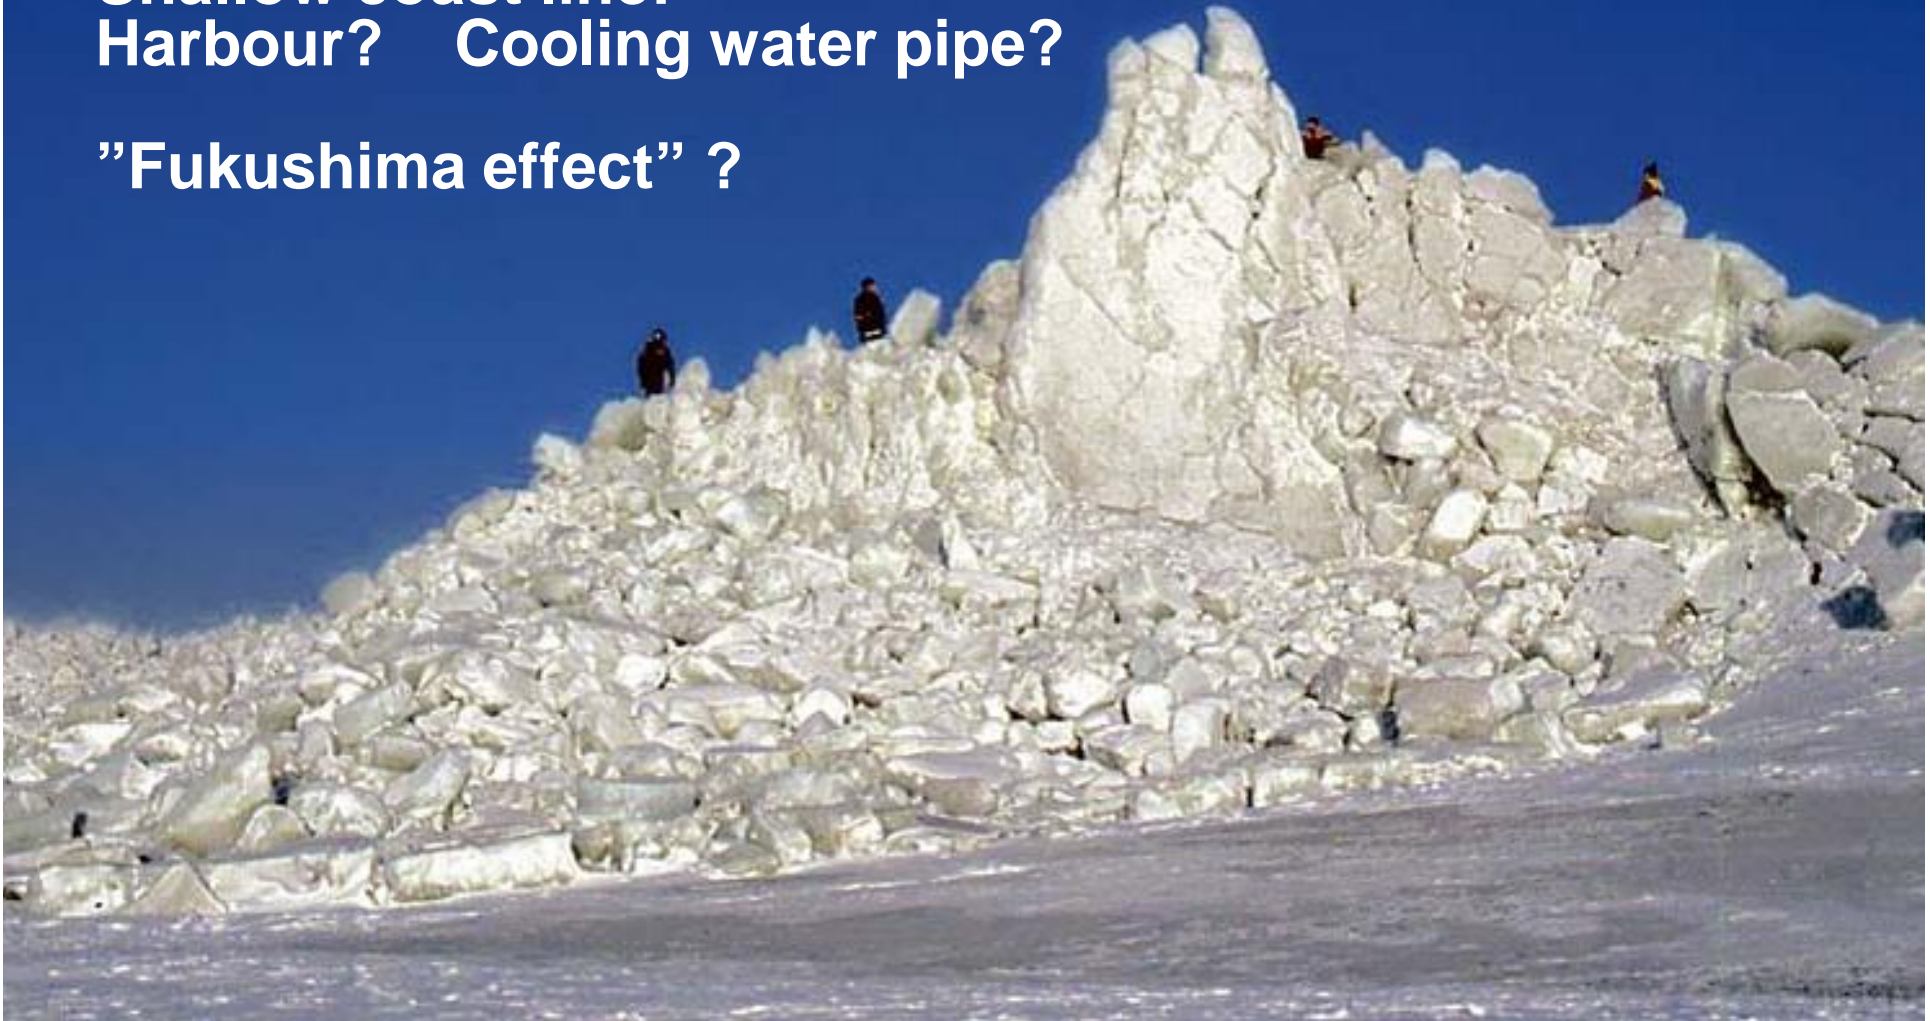

**3) No solution for
nuclear waste**

... Safety demands, global economy and renewables are making nuclear business more expensive

**Low land area, average 1,5 m above sea level,
Shallow coast line!
Harbour? Cooling water pipe?**

”Fukushima effect” ?

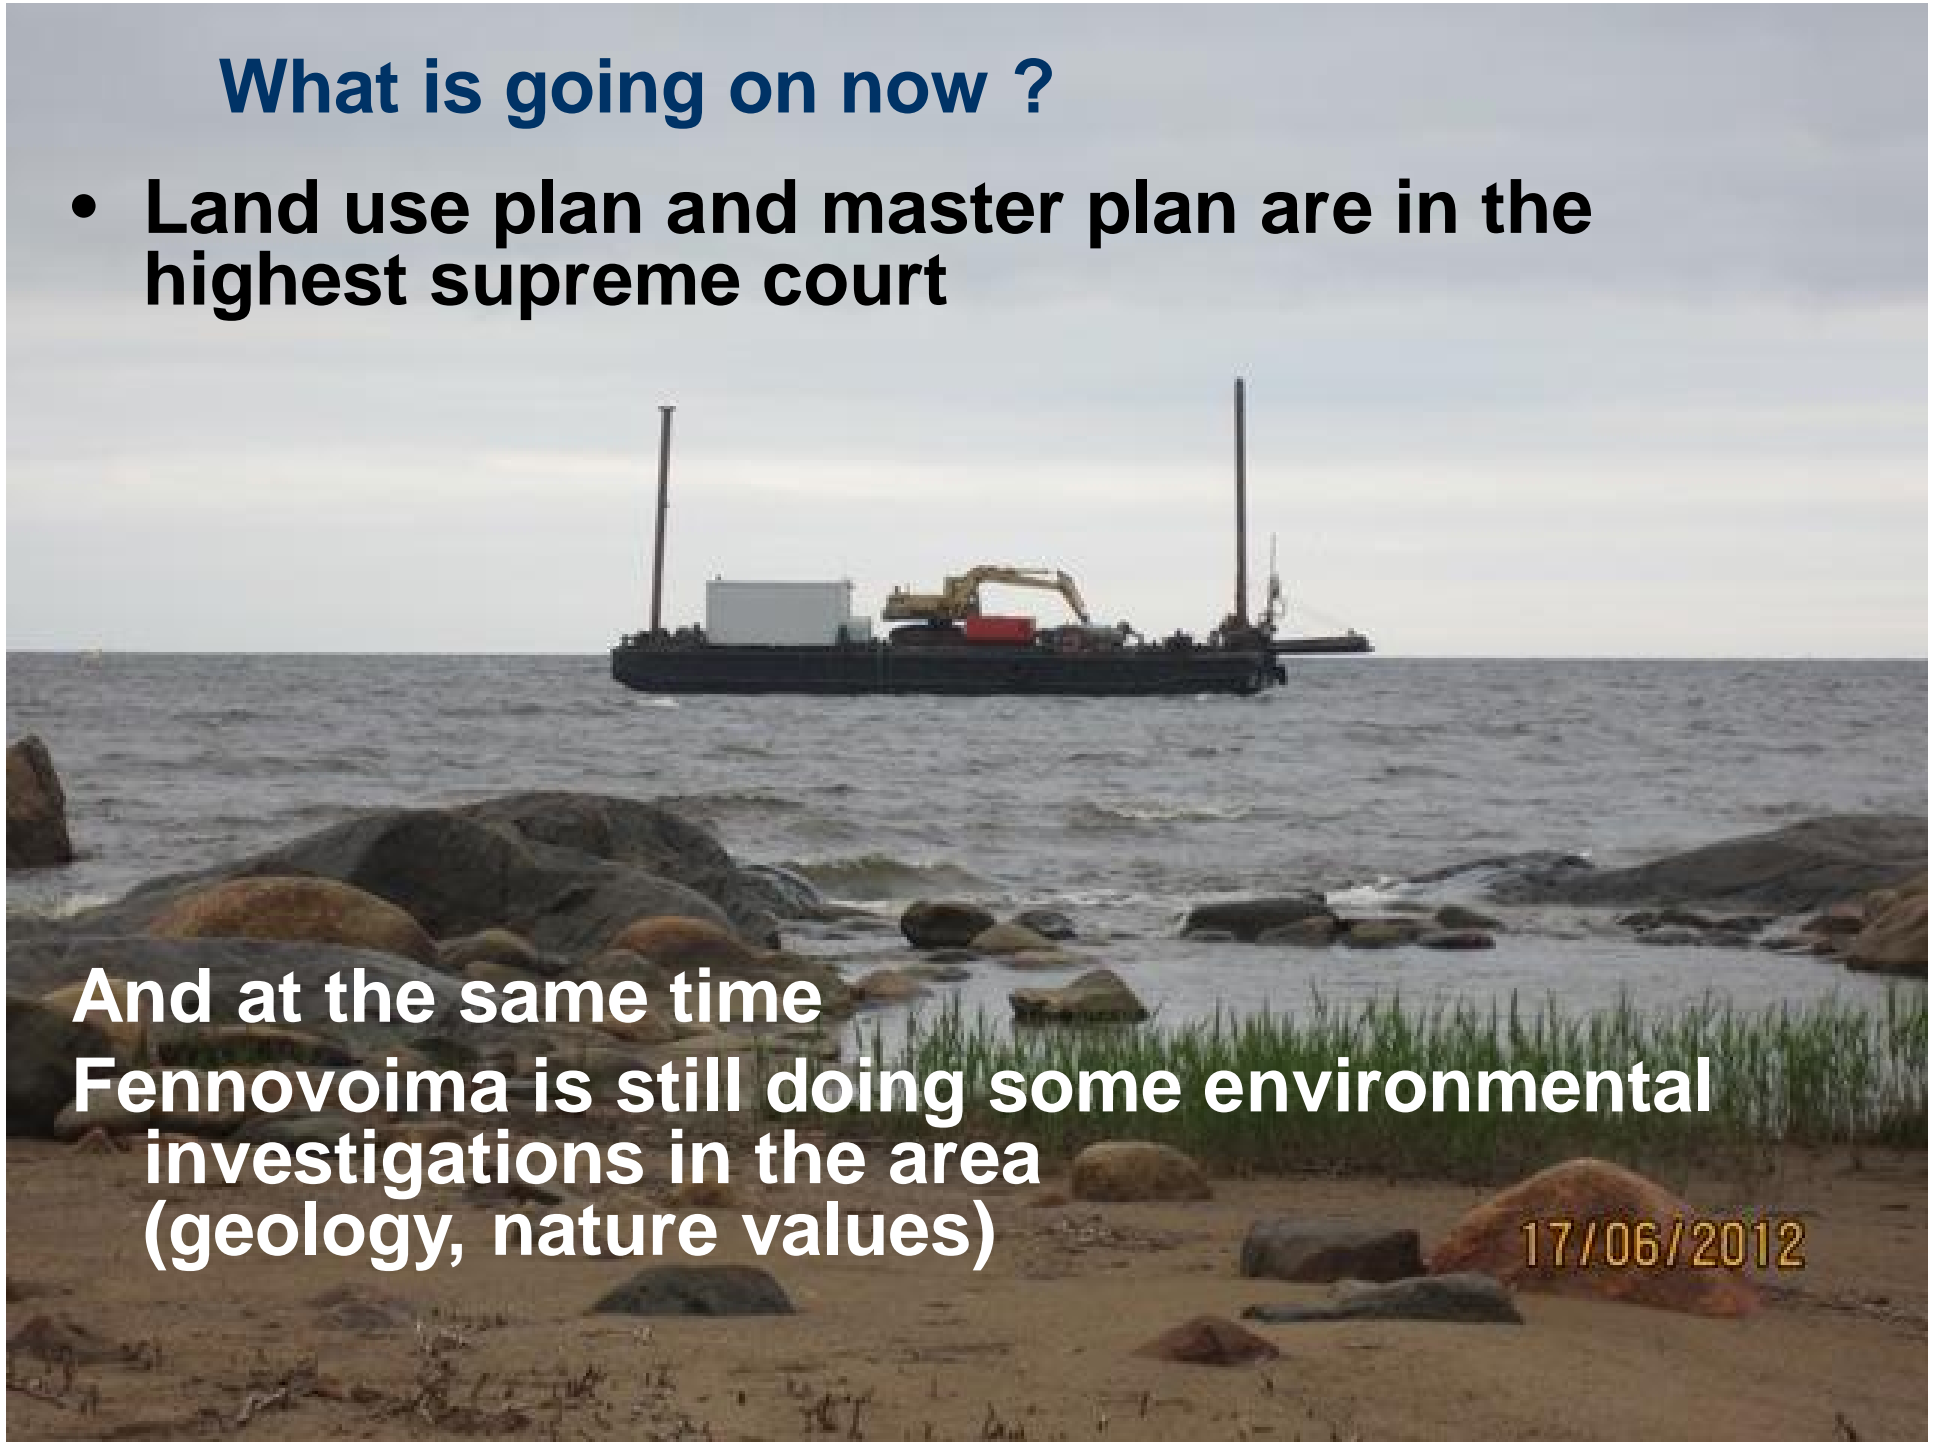

What is going on now ?

- Land use plan and master plan are in the highest supreme court

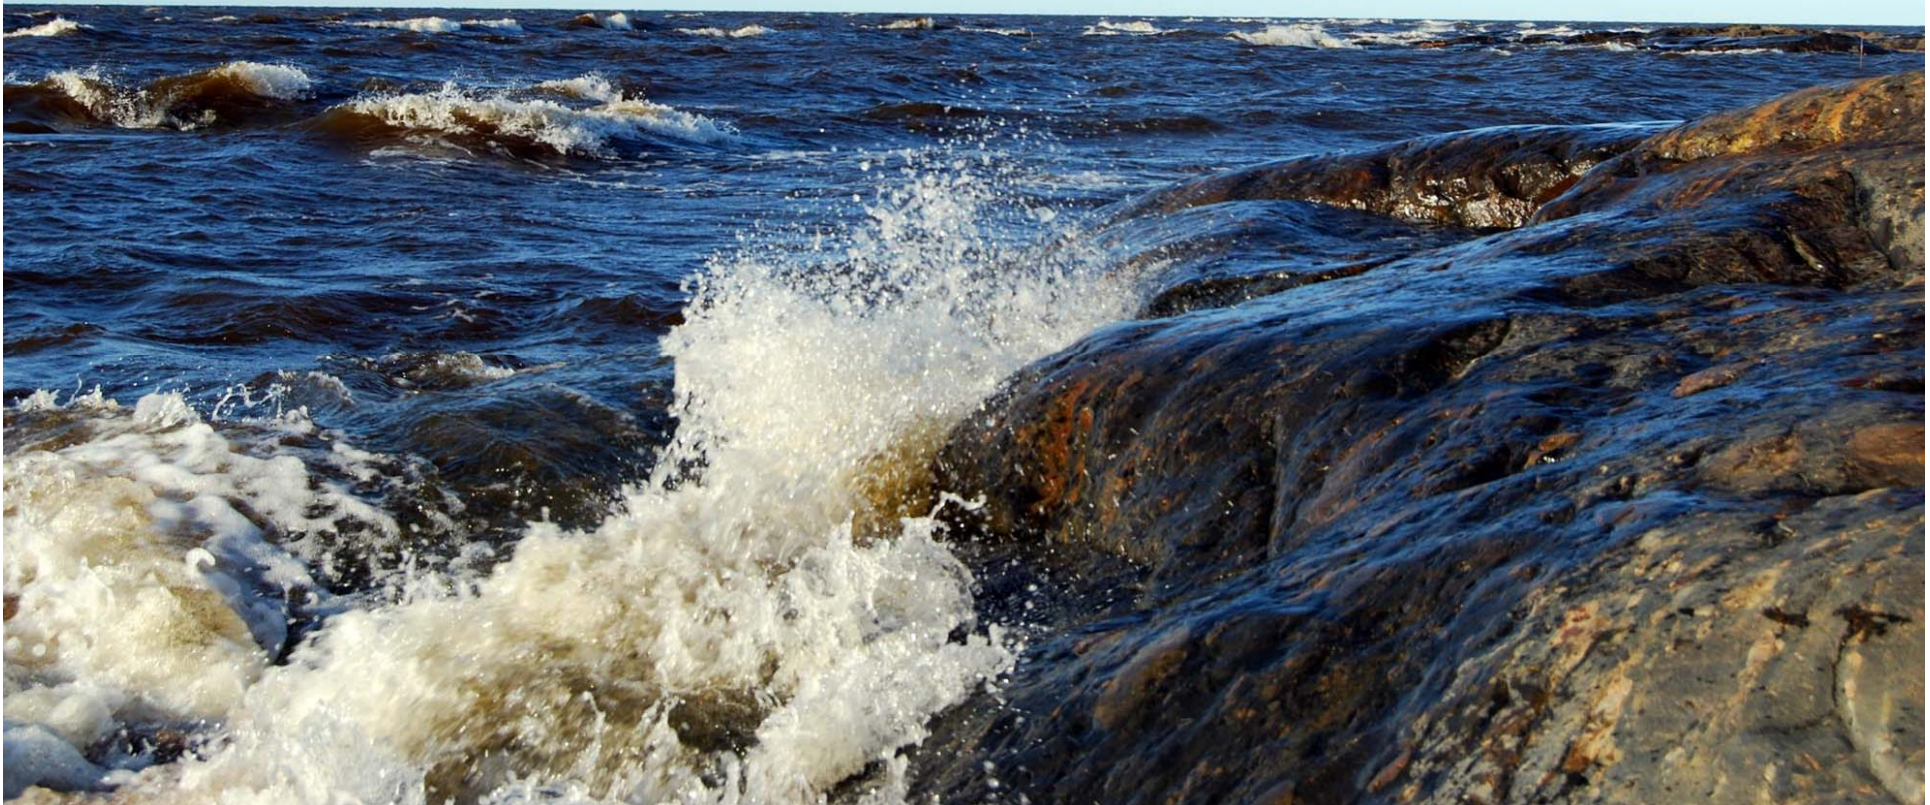

And at the same time
Fennovoima is still doing some environmental
investigations in the area
(geology, nature values)

17/06/2012

The project is delayed even before it is started!

- In the beginning of August Fennovoima announced, they will not (be able to) start to construct any infra (roads etc.) sooner than "during 2014".
- In the end of August Fennovoima has lost some of the shareholders, again!

Aktieägaren som har redan lämnat Fennovoima:

Ålansd Energi

Jyväskylän Energia

S-gruppen

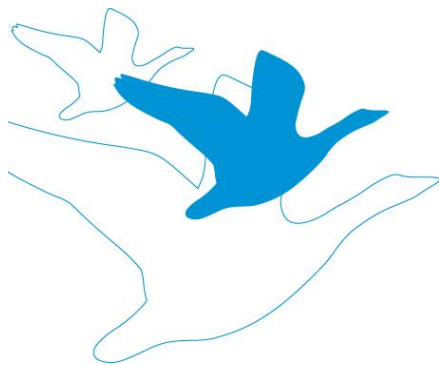

Atria

Omya

Outokummun Energia

Lankosken Energia

Leppäkosken Energia

Aktieägaren som har minskat sin avdelning

Katternö Kärnkraft, Boliden ...

We hope support and activity towards Fennvoima
and it's shareholders:

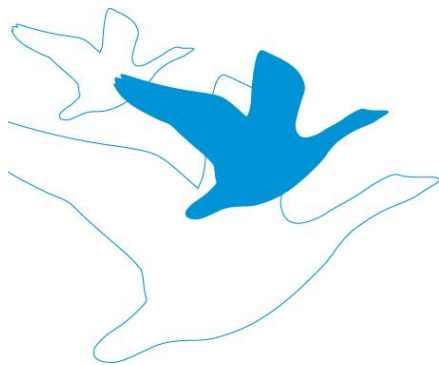

For instance:

Valio

KESKO

Boliden

E.ON Nordic !!!

Thank you for listening!
